The global Veneer Splicing Machine market size is expected to reach \$ 1049 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Veneer splicing machines are woodworking machines used to join individual veneer sheets edge-to-edge into wider continuous panels for plywood, furniture, and decorative surface production. These machines employ stitching, gluing, or taping technologies to ensure uniform joints and surface quality. In 2025, the average selling price of veneer splicing machines is approximately US\$165,000 per machine, with global sales volume reaching around 4,300 machines. The industry maintains a gross margin of 30%–50%, supported by equipment automation value, precision requirements, and strong demand from panel and furniture manufacturing industries.
