## Abstracts

According to our (Global Info Research) latest study, the global Veneered Panels market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Veneered Panels are a type of panel made by bonding a thin layer of wood, called a veneer, onto a thicker core panel. The veneer is usually made of a high-quality wood species with an attractive grain pattern, such as oak, walnut, or maple. The core panel, on the other hand, is usually made of a lower quality or less expensive wood species, such as MDF, particleboard, or plywood. Veneered panels are more affordable and help end users to significantly improve aesthetic appeal of their structures and furniture. They are durable, eco-friendly, moisture resistant, and reduce wood wastage to a large extent. Veneered panels are widely used in various applications in industries such as construction, furniture, automotive, and marine in the United Kingdom.

The Global Info Research report includes an overview of the development of the Veneered Panels industry chain, the market status of Construction Industry (Plywood, MDF), Marine Industry (Plywood, MDF), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Veneered Panels.
