## Abstracts

The global Veneered Panels market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Veneered Panels are a type of panel made by bonding a thin layer of wood, called a veneer, onto a thicker core panel. The veneer is usually made of a high-quality wood species with an attractive grain pattern, such as oak, walnut, or maple. The core panel, on the other hand, is usually made of a lower quality or less expensive wood species, such as MDF, particleboard, or plywood. Veneered panels are more affordable and help end users to significantly improve aesthetic appeal of their structures and furniture. They are durable, eco-friendly, moisture resistant, and reduce wood wastage to a large extent. Veneered panels are widely used in various applications in industries such as construction, furniture, automotive, and marine in the United Kingdom.

This report studies the global Veneered Panels production, demand, key manufacturers, and key regions.
