Abstracts

Venous thromboembolism (VTE), which is composed of deep vein thrombosis (DVT) and pulmonary embolism (PE), is a blood clot (thrombosis) of the circulatory system that leads to impeded blood flow, which can have serious consequences in the affected individual (Heit, 2015). In VTE, a DVT is a clot that occurs only in the veins; generally, they occur in the deep veins of the legs and pelvis, but may also occur in the veins of the upper body (AHA, 2017; Cohen et al., 2007; Heit, 2015). The clot may break off from its original location and travel throughout the circulatory system, and if the clot ends up in the lung, it is known as a PE
