According to our (Global Info Research) latest study, the global Ventilated Car Seat Motor market size was valued at US\$ 298 million in 2024 and is forecast to a readjusted size of USD 401 million by 2031 with a CAGR of 4.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Automobile seat ventilation motor is a component used in car seat ventilation system. It is electrically driven and can provide airflow and temperature control for seat ventilation. These motors are usually installed inside the seat and adjust the temperature of the seat surface by blowing or extracting air to provide a more comfortable driving experience.

At the regional level, the Chinese market has changed rapidly in the past few years. The market size in 2022 is 93.83 million US dollars, accounting for about 36.86% of the world. It is expected to reach 142.41 million US dollars in 2029, and the global share will reach 39.49%.

In terms of product type and technology, fan motors occupy a major share, with a market size of 173.98 million US dollars in 2022, accounting for 68.35% of the market, and it is expected to reach 250.91 million US dollars in 2029.

In terms of product market application, seat manufacturers occupy 79.24% of the market share. In addition to supplying seat manufacturers, the market for personal

modification provided to consumers through dealers also occupies a certain share, but under the current severe market competition, vehicle manufacturers have become one of the means used by vehicle manufacturers to reduce prices and increase configurations. Therefore, seat ventilation, which was previously a high-end function, will be equipped on lower-end models. It is expected that the market share of seat ventilation motors used in automotive seat manufacturers will gradually increase in the future, and the personal modification market will gradually shrink.

Currently, the world's major manufacturers include MinebeaMitsumi, ebm-papst, ASPINA, Nidec and DENSO. In 2022, the top five major manufacturers accounted for more than 68.66% of the market share. It is expected that industry competition will become more intense in the next few years, especially in the Chinese market.
