Abstracts

Fintech solutions provide alternative finance firms with a platform for investors to directly come across companies and individuals looking for equity financing and debt. The technology has enabled new players to take faster decisions, engage with customers more precisely, and run operations at low cost-to-income ratios compared with traditional banks. The low-interest rates offered in the alternative finance sector have lowered the defaults rate and led investors to seek high-yielding assets. The main areas of focus for investors are lending, money transfers, blockchain, payment processing, and wealth management among others. Several VC firms are investing in fintech startups, wherein the firms are exploring software to develop financial planning and other portfolio management tasks. These startups aim to disrupt traditionally modeled corporations. Of late, many banks are coming forward and partnering with alternative lenders, a trend that has taken over the banking and fintech sector. For banks, these collaborations are expected to increase the customer base and improve their footprint, while for alternative lenders, it will bring in more customers and capital.
