Versatile climbing daisy chain is a piece of equipment made of high-strength nylon or ultra-high molecular weight polyethylene (such as Dyneema), which is used by climbers to fix their positions, protect themselves, or organize their equipment when climbing or hanging on a wall. It consists of a series of continuously sewn rings, each of which can independently withstand a certain amount of tension, allowing climbers to flexibly adjust the length of the hanging point or connect multiple equipment such as safety belts, carabiners, protection devices, etc. as needed. Unlike traditional single-function daisy chains, the design of the Versatile Daisy Chain pays more attention to load distribution and impact resistance, supporting the different needs of static load positioning and dynamic protection. Due to its lightness, durability and strong adaptability, the Versatile Daisy Chain is widely used in a variety of environments such as traditional climbing, sport climbing, big wall climbing and high-altitude rescue. With the popularity of rock climbing and higher requirements for safety, this type of equipment is constantly optimizing materials and structures to improve durability and safety of use.
