Vertical Air Curtain is an air barrier device installed on both sides of the door frame or entrance. It forms an invisible barrier through high-speed airflow in the vertical direction, blocking the indoor and outdoor air circulation, and maintaining the stability and comfort of the indoor environment. Unlike traditional top-mounted air curtains, vertical air curtains supply air from one or both sides of the door frame to the other side, which is particularly suitable for scenes with extra-high doorways, wide doorways or limited top space. Its design can not only effectively isolate the exchange of cold and hot air, but also prevent the entry of dust, insects and odors, while providing convenience for the passage of personnel and equipment.

This report is a detailed and comprehensive analysis for global Vertical Air Curtain market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
