A vertical ball mill is a device for crushing and grinding ores, and its cylinder is placed vertically. It drives the internal grinding media (such as steel balls) and the material to move together by rotating the cylinder, and uses the mutual impact and friction between the grinding media and the material to continuously crush and finely grind the material. Vertical ball mills usually have the characteristics of small footprint, compact structure, low energy consumption, high grinding efficiency, etc., and are suitable for various hardness and brittle materials.
