According to our (Global Info Research) latest study, the global Vertical Cantilever Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A 'Vertical Cantilever Pump' is a type of centrifugal pump that features a unique design where the pump's motor and impeller are located outside of the liquid being pumped. The impeller is suspended from a cantilevered shaft that extends downward into the liquid. This design allows the pump to handle corrosive, abrasive, or otherwise challenging fluids without exposing the pump's internal components to the fluid.

These pumps are widely used in industries such as chemical processing, mining, wastewater treatment, pulp and paper, and more. Their unique design makes them well-suited for challenging fluid-handling applications, offering enhanced reliability and reduced maintenance in corrosive or abrasive environments.
