## Abstracts

The global Vertical Cantilever Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

These pumps are widely used in industries such as chemical processing, mining, wastewater treatment, pulp and paper, and more. Their unique design makes them well-suited for challenging fluid-handling applications, offering enhanced reliability and reduced maintenance in corrosive or abrasive environments.

A 'Vertical Cantilever Pump' is a type of centrifugal pump that features a unique design where the pump's motor and impeller are located outside of the liquid being pumped. The impeller is suspended from a cantilevered shaft that extends downward into the liquid. This design allows the pump to handle corrosive, abrasive, or otherwise challenging fluids without exposing the pump's internal components to the fluid.
