Vertical Centrifuge Tube is a specialized laboratory vessel designed for use in centrifugation processes. Constructed in a vertical orientation, these tubes are typically made of materials like plastic or glass and come with tight-sealing caps. They facilitate the separation of components in liquid samples by subjecting them to high-speed rotational forces within a centrifuge. The vertical design allows for efficient sedimentation, ensuring clear separation of substances based on their densities. These tubes find widespread applications in molecular biology, biochemistry, and clinical diagnostics, providing a crucial tool for isolating and analyzing various components from complex biological samples.
