Vertical circulation parking equipment is an efficient mechanical parking system that realizes automatic access to vehicles through vertical circulation. The system uses a vertical lifting device and a rotating platform, which can circulate in the vertical space to maximize the use of limited space. After the vehicle enters the equipment, the system will automatically store it in the appropriate location and quickly deliver the vehicle to the exit when picking up the vehicle. This kind of equipment is suitable for places with small space but large parking demand, such as urban business districts and high-rise buildings.
