Abstracts

Vertical decanter centrifuges' vertical structures using a mechanical seal ensures thorough hermeticity. Its pressure-resistant structure also allows it to separate substances even under high pressure. Requiring less installation space is another advantage of the vertical decanter type centrifugal separator. It is designed to perform efficient separation even under severe conditions and can demonstrate outstanding performance in deliquoring of resins, solid-liquid separation of slurry containing organic solvents, collection of catalysts, coal liquefaction, and solid-liquid separation of heavy oils and waste plastics at high temperature and high pressure in chemical factories.
