According to our (Global Info Research) latest study, the global Vacuum Thermoformed Packaging market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Vacuum thermoforming is the shaping of plastic sheet material using sufficient heat to make the plastic pliable enough to stretch it onto or into a moulded profile. Once the shape is formed and allowed to cool it can then be trimmed into a useable product – typically blister packaging, clampack or clamshell packaging.

Plastics have become a vital part of packaging in today's world. Plastics are finding a major portion of the packaging industry. Thermoforming is a process in which a sheet of plastic is heated made flexible then fabricated and shaped in required shape to make it usable.
