The global Vertical Fan Coil Units market size is expected to reach $ 1184.3 million by 2030, rising at a market growth of 3.0% CAGR during the forecast period (2024-2030).

Vertical Fan Coil Units use fans to deliver conditioned air directly into the space they serve. They contain heat exchange coils through which either chilled water or hot water circulates to provide temperature control. The fan blows air over these coils, exchanging heat with the circulating water.Vertical fan coil units offer both heating and cooling capabilities. They are typically connected to a central HVAC system or a heat pump that supplies the necessary hot or cold water for temperature control.

Vertical Fan Coil Units are indoor HVAC (Heating, Ventilation, and Air Conditioning) devices commonly used in commercial and residential buildings. They are designed to provide both heating and cooling services to individual rooms or spaces.

This report studies the global Vertical Fan Coil Units production, demand, key manufacturers, and key regions.
