Vertical Farming Lighting System is a specialized lighting solution designed to support plant growth in vertically stacked layers, typically in controlled indoor environments. These systems use energy-efficient artificial light sources, such as LED or fluorescent lights, to provide the optimal spectrum, intensity, and duration of light required for photosynthesis and plant development. By mimicking natural sunlight and offering customizable settings, vertical farming lighting systems enable year-round cultivation of crops, improve yields, and reduce the reliance on natural light. They are integral to modern vertical farming practices, which focus on maximizing space efficiency and sustainable agriculture.
