The vertical intelligent grounding box is a grounding protection device designed for power systems, communication base stations, industrial control sites and new energy facilities. It adopts a vertical structure and has efficient intelligent monitoring and safety protection functions. It can detect the grounding status in real time, support fault alarm, remote control and data upload, and realize the comprehensive management of the grounding system through built-in intelligent control modules and sensors. The equipment casing is usually made of corrosion-resistant, stainless steel or aluminum alloy, with waterproof, dustproof, lightning protection and other properties, suitable for harsh outdoor environments. Its structural design is flexible and supports multi-loop grounding connections to meet the needs of large-scale and complex application scenarios. In addition, the vertical design has a larger internal space and heat dissipation capacity, which is suitable for deployment in large and medium-sized projects such as distribution stations, substations, wind power and photovoltaic stations.
