## Abstracts

The global Vertical Packed Bed Scrubber market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Vertical packed bed scrubber is an air pollution control device used to remove pollutants from industrial exhaust gases or air streams. It consists of a vertical chamber filled with packing material, such as plastic, metal, or ceramic, which provides a large surface area for the gas to come into contact with a liquid (usually water or a chemical solution). As the gas passes through the packed bed, pollutants are absorbed or trapped by the liquid, resulting in cleaner gas emissions.
