Abstracts

The global Vertical Ring Pulsating High Gradient Magnetic Separators market size is expected to reach \$ 903 million by 2029, rising at a market growth of 4.1% CAGR during the forecast period (2023-2029).

Many critical minerals experienced broad-based price increases in 2021 and early 2022, accompanied by strong volatility, particularly for nickel and lithium. Most prices began to moderate in the latter half of 2022 and into 2023 but remain well above historical averages. Higher or volatile mineral prices during 2021 and 2022 highlighted the importance of material prices in the costs of transforming our energy systems. According to the IEA's clean energy equipment price index, clean energy technology costs continued to decline until the end of 2020 due to technology innovation and economies of scale, but high material prices then reversed this decade-long trend. Despite these recent setbacks, it is noteworthy that the prices of all clean energy technologies today are significantly lower than a decade ago.

The vertical ring and pulsating high-gradient magnetic separator utilizes the combined force field of magnetism, pulsating fluid and gravity to continuously beneficiate fine weakly magnetic minerals. It is equipped with a unique pulsating mechanism and possesses the advantages of a large beneficiation ratio, high recovery, and a matrix that does not easily clog.
