The global Vertical Screw Conveyor for Agriculture market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Vertical Screw Conveyor is a type of conveyor system designed for agricultural applications. It is used to transport materials such as grain, seeds, and fertilizers vertically to various levels within a processing facility or storage facility. The conveyor is made up of a spiral-shaped screw that rotates within a cylindrical tube. As the screw rotates, it moves the material upward along the length of the tube to the desired location. The design of the Vertical Screw Conveyor allows for easy cleaning and maintenance, as well as efficient operation in both wet and dry conditions. It is commonly used in the agriculture industry for storage and transportation of crops and other materials.
