## Abstracts

According to our (Global Info Research) latest study, the global Vertical Shaft Drilling Rig market size was valued at US\$ 345 million in 2025 and is forecast to a readjusted size of US\$ 481 million by 2032 with a CAGR of 4.8% during review period.

A vertical shaft drilling rig is specialized equipment for vertical or near-vertical drilling in mines, tunnels, and geological exploration. It operates by rotating a drill bit while using mud or air circulation to remove debris, enabling deep rock excavation. The price of a vertical shaft drilling rig varies by model, depth, and automation level, generally ranging from 1–30 million CNY per unit (approximately 0.14–4.3 million USD per unit). Key components include the drilling mast, drill platform, rotary system, power unit, hoisting system, and hydraulic or electronic control systems. Main materials include steel, alloy steel, cast steel, high-hardness drill bits, and hydraulic/electronic components. In the industry chain, upstream includes steel and specialty alloy producers, motor and hydraulic component manufacturers, and drill bit companies. Downstream covers coal and metal mines, tunnel construction, geothermal and oil & gas drilling, as well as equipment leasing and construction services. As a high-value equipment, vertical shaft drilling rigs integrate mechanical, hydraulic, electronic, and construction technologies, serving as core machinery for mining and underground engineering.
