Vertical sliding door systems are entrance or isolation systems that use guide rails and drive mechanisms to move the door vertically up and down. They are characterized by space saving, stable opening and closing, and high security, and are commonly used in industrial plants, equipment protection, and special building access routes.

Upstream components mainly include steel or aluminum alloy profiles, drive motors, reducers, guide rails, control systems, and safety sensing components; downstream applications cover industrial automation equipment, logistics channels, clean rooms, production line protection, and special building entrances. The global unit price of a vertical sliding door system is \$2,580, with annual sales of approximately 810,000 units and a global annual production capacity of approximately 1.1 million units. The industry profit margin is 25%.
