Vertical Storing Mechanical Dock Leveler is a device used for cargo loading and unloading operations. It is designed to balance the height difference between the truck and the dock by adjusting the height of the platform, so as to achieve smooth and fast cargo transfer. Unlike traditional horizontal storage lifts, the vertical storage mechanical dock leveler uses a mechanical device to fold the lift vertically, which takes up less space and is suitable for working environments with limited space. It consists of a platform, lifting device, support rods, locking device and operating system. It uses mechanical principles to achieve lifting and lowering through manual or electric drive to ensure a smooth transition between different heights.
