## Abstracts

According to our (Global Info Research) latest study, the global Vertical Stranding Machine market size was valued at US\$ 157 million in 2024 and is forecast to a readjusted size of USD 216 million by 2031 with a CAGR of 4.8% during review period.

A Vertical Stranding Machine is a special equipment used in cable manufacturing. Its main function is to twist multiple insulated cores into cables according to certain rules, and complete filling, wrapping and other process operations at the same time. Its structure is usually arranged vertically, which is convenient for the cores to maintain uniform tension during the twisting process and achieve an efficient production process. The vertical cabling machine is suitable for the production of various types of power cables, communication cables and special cables, especially for long-length and high-demand cable manufacturing tasks. Compared with the horizontal cabling machine, the vertical design has the advantages of small footprint, easy operation and high production efficiency. It is one of the indispensable key equipment in the modern cable industry.
