The Very Small Form Factor Connector is a high-density optical fiber connector designed to be more compact than traditional connectors, offering superior port density. This miniaturization is ideal for environments that require efficient space utilization and high bandwidth capacity, such as data centers, enterprise networks, and high-performance computing systems.

The rise of Very Small Form Factor Connectors aligns with the development of the 400Gb Ethernet standard defined by IEEE. This standard introduced two advanced optical transceivers—QSFP-DD (Quad Small Form-factor Pluggable Double Density) and OSFP (Octal Small Form-factor Pluggable)—which are engineered to support 400Gb of bandwidth. These transceivers capitalize on the small size and high-density design of Very Small Form Factor Connectors, making them vital for modern networking infrastructures where bandwidth and space efficiency are critical.
