The development trend of Vessel Integrated Bridge Systems (IBS) is focused on enhancing the safety, efficiency, and automation of maritime operations. Here are some key trends in the development of IBS. IBS is becoming more automated and digitally connected, allowing for seamless integration of various navigation and communication systems. This trend includes the use of advanced sensors, artificial intelligence, and machine learning algorithms to automate routine tasks and improve decision-making processes. IBS is being equipped with advanced sensors, such as radar, sonar, and cameras, to provide real-time information about the vessel's surroundings. This helps improve situational awareness for the crew, enabling them to make informed decisions and avoid potential hazards. IBS is being developed to integrate various data and communication systems, such as Electronic Chart Display and Information Systems (ECDIS), Automatic Identification Systems (AIS), and Global Positioning Systems (GPS). This integration allows for seamless exchange of information between different systems, reducing the risk of errors and improving operational efficiency.
