Veterinary Chinese Medicine Granules refer to granular formulations of traditional Chinese herbs (single or compound) processed via modern extraction, concentration, and drying technologies, combining TCM efficacy with user-friendly administration. Designed based on TCM syndrome differentiation, they address conditions (e.g., wind-cold, damp-heat, Qi deficiency) in livestock (pigs, poultry, cattle) and pets (dogs, cats), targeting digestive disorders (diarrhea, indigestion), respiratory illnesses (cough, pneumonia), and immune modulation. The granule form allows direct oral use, water dissolution, or feed mixing, optimizing dosing efficiency for large-scale farms. With advantages like natural composition, low residue, and minimal resistance risk, these granules align with 'antibiotic reduction' policies and sustainable farming, some even serving as growth-promoting feed additives.
