## Abstracts

The global Veterinary CO<sub>2</sub> Absorbent market size is expected to reach \$ 51.64 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Veterinary CO<sub>2</sub> absorbent is a specialized chemical material used during animal anesthesia (typically composed of calcium-based compounds such as calcium hydroxide). Its core function is to be sealed within the absorbent canister of the anesthesia machine, rapidly removing exhaled carbon dioxide through a chemical reaction, thus enabling the recycling of anesthetic gas. It addresses the life-threatening risks of hypercapnia, respiratory acidosis, and even respiratory depression caused by repeated respiration of exhaled carbon dioxide during general anesthesia, while also significantly reducing anesthesia costs by lowering the fresh gas flow rate. The upstream supply chain primarily includes manufacturers of basic chemical raw materials such as calcium hydroxide and sodium hydroxide, as well as suppliers of additives and packaging materials such as zeolite and diatomaceous earth. The downstream supply chain distributes to various animal hospitals and veterinary clinics through medical device distributors, ultimately serving animals undergoing surgery or experimental research. In 2025, the production of veterinary CO<sub>2</sub> absorbent is estimated at 6,000 tons, with an average price of approximately US\$6,000 per ton, a gross profit margin of approximately 35%, and a single-line capacity of 100 tons per year.

This report studies the global Veterinary CO<sub>2</sub> Absorbent production, demand, key manufacturers, and key regions.
