## Abstracts

According to our (Global Info Research) latest study, the global Veterinary Dental Software market size was valued at US\$ 276 million in 2024 and is forecast to a readjusted size of USD 404 million by 2031 with a CAGR of 5.7% during review period.

The veterinary dental software market is experiencing significant growth due to the increasing awareness about pet dental health and the rising adoption of pets worldwide. North America dominates the veterinary dental software market due to the high pet ownership rate and the presence of advanced veterinary healthcare infrastructure. Europe is also a significant market for veterinary dental software, driven by the increasing pet adoption and the growing focus on pet dental care. The Asia Pacific region is witnessing rapid growth in the veterinary dental software market due to the rising disposable income, increasing pet ownership, and the growing awareness about pet dental health. The veterinary dental software market is highly fragmented, with several small and medium-sized players operating in the market. However, some key players have a significant market share due to their strong product portfolio, extensive distribution network, and strategic partnerships. Increasing pet ownership and the growing awareness about pet dental health present significant opportunities for the veterinary dental software market. The integration of advanced technologies like artificial intelligence and machine learning in veterinary dental software can further enhance the market growth. However, the high cost of veterinary dental software and the lack of awareness among pet owners in developing regions can pose challenges to market growth. The introduction of cloud-based veterinary dental software solutions has gained traction in the market, as it allows veterinarians to access patient records and treatment plans remotely. Some companies are focusing on developing mobile applications for veterinary dental software, enabling veterinarians to access patient information and

treatment plans on their smartphones or tablets. Integration of electronic medical records (EMR) and practice management software with veterinary dental software is another recent development in the market, streamlining the workflow and improving efficiency.
