Additionally, the use of advanced technologies and the development of cost-effective and user-friendly devices may attract more consumers, leading to market expansion.

The Veterinary Electro-Pneumatic Ventilator is a medical equipment designed for animals that are in need of mechanical ventilation due to respiratory distress or dysfunction. It works by mechanically inflating and deflating the lungs of the animal using a combination of electricity and air pressure. The electro-pneumatic ventilator can be adjusted to provide controlled amounts of air into the lungs at regular intervals, allowing the animal to maintain proper oxygenation and ventilation. This device is commonly used in veterinary clinics, animal hospitals, and research facilities.
