The global Veterinary Gastrointestinal Endoscopes market size is expected to reach \$ 1032 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

In 2025, global production of Veterinary Gastrointestinal Endoscopes reached 48,000 units, with an average selling price of USD 12,500 per unit, total production capacity of 55,000 units, and a gross margin of 45%.

Veterinary Gastrointestinal Endoscopes are medical imaging devices specifically designed for examination, diagnosis, and therapeutic procedures within the gastrointestinal tract of animals. These systems typically include flexible or rigid endoscopes equipped with light sources, imaging sensors, and working channels. They are used to visualize the esophagus, stomach, small intestine, and colon of animals, and can support biopsy, foreign body removal, and minor interventional procedures, making them widely used in veterinary hospitals, clinics, and animal research institutions.

The global Veterinary Gastrointestinal Endoscopes market is driven by increasing expenditure on pet healthcare, a growing population of companion animals, and the ongoing upgrade of veterinary diagnostic technologies, resulting in steady market growth. Small animal practice, particularly the diagnosis of gastrointestinal diseases in dogs and cats, represents the core demand segment. North America and Europe lead in the adoption of high-end veterinary endoscopy systems and video imaging technologies, while the Asia-Pacific region is experiencing faster growth due to improving veterinary infrastructure and rising awareness of pet health. Overall, the market is characterized by relatively high technical barriers, a focus on mid- to high-end equipment, a relatively concentrated competitive landscape, and clear trends toward high-definition imaging, multifunctionality, and system integration.
