## Abstracts

The global Veterinary Immunization market size is expected to reach \$ 24546 million by 2032, rising at a market growth of 8.9% CAGR during the forecast period (2026-2032).

In 2025, global Veterinary Immunization approximately 470,252 k doses, with an average global market price of around US\$ 28 per dose. Gross margin is about 47%. The cost is 15 usd. The Production is about 500,000 k doses. Veterinary Immunizations are biological products used to prevent and control diseases in animals by stimulating an immune response, thereby enhancing the animal's resistance to pathogens. These vaccines cover poultry, livestock, companion animals, and aquaculture species, and include inactivated vaccines, live-attenuated vaccines, subunit vaccines, and nucleic acid-based vaccines. They are widely used in livestock farming, pet health management, and overall animal disease control systems.

With the global population increasing and rising demand for animal protein, the livestock, poultry, companion animal, and aquaculture sectors will continue to drive demand for animal vaccines. The diversity of animal diseases, cross-species transmission risks, and restrictions on antibiotic use make vaccines a central component of disease prevention strategies. In the future, companies will focus on innovative vaccine technologies, including genetically engineered vaccines, subunit vaccines, viral vector vaccines, mRNA vaccines, and DNA vaccines, aiming to enhance immune response, extend protection duration, and reduce side effects.

Digital and intelligent farming management will enable more precise and personalized vaccination programs. IoT, sensors, and data analytics platforms allow real-time monitoring of animal health, disease risk, and immune status, enabling scientific determination of vaccination schedules, dosages, and combination strategies. This

approach improves vaccine effectiveness, reduces farming risks, and supports large-scale management for industrial farms and veterinary institutions.

Moreover, global policy support for animal health, regulatory standardization, and vaccine certification systems will encourage more companies to invest in research, development, and market expansion. Multinational and domestic firms will strengthen collaboration through technology sharing, joint R&D, supply chain integration, and regional production layout to cover more animal species and regions. As the vaccine market becomes more international and standardized, the animal health vaccine industry chain will mature, elevating global animal health management, while simultaneously driving growth in biopharmaceuticals, vaccine manufacturing equipment, and digital agriculture services.
