According to our (Global Info Research) latest study, the global Veterinary Management Software market size was valued at US\$ 1250 million in 2025 and is forecast to a readjusted size of US\$ 2143 million by 2032 with a CAGR of 8.0% during review period.

Veterinary management software is a software featuring electronic medical records (EMR) management, appointment scheduling and communication tools for veterinarians.

Driving factors in the veterinary management software market include rapid growth and professionalization of pet care, with more clinics, hospitals and specialty practices needing digital tools to handle rising patient volumes, complex treatment plans and demanding pet owners. Increasing expectations for transparent, high-touch client service?online booking, reminders, detailed invoices, telehealth, portal access to records?are pushing practices to adopt integrated practice management systems rather than paper files or basic billing tools. At the same time, strong competition and rising staff costs make efficiency and revenue optimization critical, driving demand for software that streamlines scheduling, inventory, billing, insurance claims and preventive-care plans while providing analytics on performance and profitability. The expansion of corporate/chain veterinary groups and multi-location practices also favors cloud-based platforms that centralize data and standardize workflows.
