Abstracts

According to our (Global Info Research) latest study, the global Veterinary Orthotic Braces market size was valued at US\$ 133 million in 2025 and is forecast to a readjusted size of US\$ 234 million by 2032 with a CAGR of 8.3% during review period.

In 2025, global sales volume of veterinary orthotic braces reached approximately 890 Thousand Units, with an average selling price of about US\$145/Unit. Veterinary orthotic braces are externally worn veterinary rehabilitation devices designed according to the limb anatomy, joint mechanics, and musculoskeletal requirements of companion animals such as dogs and cats. They provide joint support and stabilization, restrict abnormal motion, improve load distribution, assist weight bearing, and facilitate the recovery of mobility. These products commonly incorporate elastic textiles, neoprene, thermoplastic polymers, metallic stays, mechanical hinges, or 3D-printed polymers and are supplied as flexible, semi-rigid, or rigid devices in prefabricated, point-of-care formable, or patient-specific custom configurations. Major product forms include stifle, carpal, tarsal, elbow, shoulder, hip, cervical, spinal, and distal-limb orthoses, serving applications such as ligament and tendon injuries, joint instability, fracture recovery, degenerative joint disease, neurological motor impairment, and congenital limb abnormalities.

The global veterinary orthotic braces market is primarily driven by the aging pet population, the rising incidence of canine osteoarthritis and ligament injuries, stronger willingness among pet owners to spend on medical care, and expanding demand for conservative treatment and postoperative rehabilitation. Compared with surgery, external braces offer a non-invasive, reusable, and long-term mobility-support option, encouraging broader adoption by veterinarians, rehabilitation centers, and pet owners.

At the same time, 3D scanning, digital design, and additive manufacturing are improving fit accuracy and delivery efficiency, while standardized sizing and expanding e-commerce channels are making products more accessible and supporting the transition from small-batch custom devices toward a market combining customized and scalable prefabricated products.
