## Abstracts

The global Veterinary Surgical Needle market size is expected to reach \$ 184 million by 2029, rising at a market growth of 3.3% CAGR during the forecast period (2023-2029).

The veterinary suture needle market is driven by several factors. Firstly, the increasing prevalence of surgical procedures in veterinary medicine, including wound closures and soft tissue repairs, contributes to the demand for suture needles. Additionally, advancements in veterinary surgical techniques and the growing emphasis on precise and efficient wound closure techniques require specialized suture needles with improved sharpness, strength, and maneuverability. Furthermore, the rising awareness of animal welfare and the need for effective veterinary healthcare have led to an increased adoption of advanced surgical interventions, thereby driving the demand for veterinary suture needles. Technological advancements in suture needle manufacturing, such as the development of atraumatic needles and novel coatings, also play a significant role in the market growth. Moreover, the expansion of the veterinary industry and increased veterinary healthcare expenditure contribute to the overall growth of the veterinary suture needle market.

Surgical needles are necessary for the placement of sutures in tissues; therefore, they must be designed to carry suture material through tissues with minimal.
