Abstracts

According to our (Global Info Research) latest study, the global Veterinary Underwater Treadmills for Companion Animals market size was valued at US\$ 23.36 million in 2025 and is forecast to a readjusted size of US\$ 42.23 million by 2032 with a CAGR of 8.4% during review period.

In 2025, global sales of pet underwater treadmills reached approximately 1,200 units, with an average selling price of about US\$18,900 per unit. Pet underwater treadmills are aquatic walking, exercise, and rehabilitation systems designed for dogs, cats, and other companion animals. A typical system consists of an enclosed or open hydrotherapy chamber, a powered treadmill belt, water filling and drainage components, water circulation and filtration equipment, temperature control, and an operating control system. The equipment uses buoyancy to reduce loading on joints and limbs while applying water resistance and hydrostatic pressure to create a controlled, low-impact exercise environment. Adjustable water depth, treadmill speed, incline, temperature, and treatment duration allow rehabilitation programs to be adapted to different mobility conditions and recovery stages. These systems are primarily used for postoperative recovery, orthopedic and neurological rehabilitation, joint mobility improvement, muscle conditioning, weight management, and restoration of physical performance in veterinary hospitals, veterinary clinics, dedicated animal rehabilitation centers, pet care facilities, animal education and training institutions, and home rehabilitation settings.

Market growth is being supported by the aging pet population and the increasing prevalence of obesity, orthopedic disorders, neurological conditions, and postoperative rehabilitation needs. Underwater treadmills reduce joint loading while enabling controlled and repeatable rehabilitation through adjustable water depth, belt speed,

incline, temperature, and treatment duration, making them increasingly important in veterinary orthopedic and mobility recovery programs. Demand is also benefiting from rising expenditure on advanced pet healthcare, the expansion of dedicated animal rehabilitation centers, greater professionalization of veterinary physiotherapy, and the introduction of smaller, more automated, and lower-priced systems by manufacturers in China and other Asian markets, which are improving equipment accessibility across regional clinics and emerging markets.
