## Abstracts

The global Veterinary Vaccine market size is expected to reach \$ 21330 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Vaccines are products designed to trigger protective immune responses and prepare the immune system to fight future infections from disease-causing agents. Vaccines stimulate the immune system's production of antibodies that identify and destroy disease-causing organisms that enter the body. Vaccines provide immunity against one or several diseases that can lessen the severity or prevent certain diseases altogether. In this report, we study the vaccine used for animals.

Factors influencing growth in demand for farm vaccines include:

- human population growth and increasing standards of living, particularly in many emerging markets;
- increasing demand for improved nutrition, particularly animal protein;
- natural resource constraints, such as scarcity of arable land, fresh water and increased competition for cultivated land, resulting in fewer resources that will be available to meet this increased demand for animal protein;
- increasing urbanization and increased focus on food safety and food security. Rising concerns over food security and increasing animal husbandry are boosting the demand for animal vaccines for the livestock population. Increasing demand for animal products has led to growth in livestock production globally.

The primary companion animal species are dogs, cats and horses. Factors influencing growth in demand for companion animal vaccines include:

- economic development and related increases in disposable income, particularly in many emerging markets;
- increasing pet ownership
- companion animals living longer, increasing medical treatment of companion animals and advances in companion animal medicines and vaccines.

North Americas is the largest consumption place, with a consumption market share nearly 36% in 2023. Following North Americas, APAC is the second largest consumption place with the consumption market share of 30%.

Global key Veterinary Vaccine players cover Merck, Boehringer Ingelheim, Zoetis, Elanco, Ceva, CAHIC, Jinyu Bio-Technology, HVRI, Ringpu Biology, Virbac, etc. In terms of revenue, the global five largest companies occupied for a share nearly 75.64% in 2023.
