The global Vetiverol market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Vetiverol, also known as (Z)-Vetiverol, is a natural organic compound classified as a sesquiterpenoid alcohol. It is derived from the essential oil of vetiver, a perennial grass native to India and widely cultivated in tropical regions around the world. Vetiver oil is well-known for its complex and earthy aroma and is used extensively in perfumery and aromatherapy.

Vetiverol is one of the key components responsible for the characteristic scent of vetiver oil. It is a colorless to pale yellow liquid with a woody, smoky, and slightly sweet aroma. This compound, along with other sesquiterpenoids present in vetiver oil, contributes to its unique fragrance profile and has made it a popular choice in the fragrance industry for both men's and women's perfumes.

Apart from its use in perfumes and colognes, vetiverol is also employed in aromatherapy for its purported relaxing and grounding properties. It is often used in various blends and formulations to promote a sense of calm and relieve stress and anxiety.
