A flat-plate solar heat exchanger is a device that absorbs solar energy and converts it into heat. It consists of a flat heat-absorbing plate, a transparent cover (such as glass), and an insulation layer. It uses a flat plate structure to convert sunlight into heat energy, which is usually used to heat water or air. This collector is widely used in solar water heating and heating systems in residential and commercial buildings because of its simple structure, low manufacturing cost, and easy installation.
