Abstracts

The global Vibrating Mesh Atomizer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The vibrating mesh nebulizer is a device that generates medicinal mist through the high-frequency vibration of the piezoelectric ceramic sheet to make the medicinal liquid pass through the fine mesh, which reduces the influence of the heat generated by the ultrasonic vibration liquid on the medicinal product. The diameter of the mesh can determine the size of the spray particles. The vibrating mesh nebulizer has higher atomization efficiency and less residual drug volume (0.1-0.5 mL), and has the advantages of low noise, small size and light weight. Compared with jet nebulizers and ultrasonic nebulizers, the drug storage tank of the vibrating mesh nebulizer can be located above the breathing tube, which is convenient for increasing the drug dose.

This report studies the global Vibrating Mesh Atomizer production, demand, key manufacturers, and key regions.
