The global Vibration Digital Detector market size is expected to reach \$ 146 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

A vibration digital detector is an intelligent sensing device that detects and analyzes vibration signals of objects through digital signal processing technology. It can sense vibration signals caused by various reasons, convert them into analog electrical signals, and then process them into signals that can be received by the alarm monitoring system controller. The shell is tamper-proof, the signal line is tamper-proof, the size is small, and the installation is convenient. It is usually installed around the storage area of ??important items such as vaults, safes, ATMs, and museums.
