According to our (Global Info Research) latest study, the global Vibration MEMS Gyroscope market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Vibration MEMS gyroscopes (Micro Electro Mechanical systems) also called micro-electromechanical systems, are gyroscopes that design, process, manufacture, measure and control micro/nano materials on the basis of micro/nano technology. It can integrate mechanical components, optical systems, drive components, and electric control systems into a micro-system of an overall unit. When the vibrating gyroscope acquires the angular velocity, it first performs basic vibration. When the angular velocity is applied, the previous vibration will change, and the gyroscope will output this change.
