A video encoder is an electronic circuit or software that compresses or decompresses digital video. It converts raw (uncompressed) digital video to a compressed format or vice versa.

### SCOPE OF THE REPORT:

This report studies the Video Encoders market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Video Encoders market by product type and applications/end industries.

According to the report, one of the major drivers for this market is increasing processing power of the collected data. The use of efficient video encoders helps increase the processing power of the data collected. Video encoders enable the users to add additional filters and settings according to the location and sector in which they are used. This helps the users to access and process the collected data according to the requirements, helping the users to reduce the overall processing time. Further, the use of filters helps in processing only the required data, enabling the users in decreasing the processing power of the collected data.

The global Video Encoders market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
