## Abstracts

According to our (Global Info Research) latest study, the global Video and Image Guided System market size was valued at US\$ 2216 million in 2025 and is forecast to a readjusted size of US\$ 3559 million by 2032 with a CAGR of 7.0% during review period.

Video and Image Guided System (VAS) refers to a system in the medical device field that uses endoscopic video, intraoperative photography, CT, MRI, ultrasound, C-arm/CBCT, fluorescence imaging, optical/electromagnetic navigation, 3D reconstruction, and surgical planning software to register, fuse, and visualize patient images, surgical instrument positions, and real-time video feeds. This assists surgeons in performing procedures such as localization, puncture, resection, ablation, implantation, radiotherapy, or minimally invasive surgery. Its core value lies in improving operational precision, reducing trauma, minimizing repeat scans, and reducing the risk of complications. Typical applications include neurosurgery, spinal surgery, orthopedics, otolaryngology, interventional radiology, tumor ablation, endoscopic surgery, radiotherapy localization, and robot-assisted surgery. Image-guided surgery technology typically includes modules such as intraoperative imaging, tracking/navigation, image registration, visualization, and robotic collaboration.

Video and Image Guided Systems are evolving from single image display devices to comprehensive platforms integrating multimodal image fusion, real-time navigation, AI-assisted recognition, robotic collaboration, and cloud-based data management. Hospitals' increasing demands for minimally invasive surgery, precision interventions, complex spinal/neurological surgeries, tumor ablation, and real-time intraoperative confirmation are driving the deep integration of CT/MRI/ultrasound/endoscopic/fluorescence imaging with navigation systems.

Simultaneously, AI segmentation, automatic registration, augmented reality display, 3D visualization, and intraoperative robotic control are enhancing the system's added value. Future competition will no longer focus solely on hardware imaging quality, but rather on clinical workflow integration capabilities, navigation accuracy, software algorithms, consumable ecosystems, cross-departmental platform deployment, and the integration capabilities of digital operating rooms within hospitals.
