According to our (Global Info Research) latest study, the global Video Splicer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The video splicer is a high-tech device that divides a complete image signal into N blocks and then distributes them to N video display units. It uses multiple ordinary video units to form a large-screen dynamic image display, which can support the simultaneous connection of multiple video devices. The video splicer can combine multiple physical outputs into an ultra-high-resolution display output after superimposed resolutions, allowing the screen wall to form a logical display with ultra-high resolution, ultra-high brightness, and ultra-large display size, completing multiple signals. The source can be displayed in various ways such as windowing, moving, zooming, etc. on the screen wall.
