## Abstracts

The global Video Splicer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The video splicer is a high-tech device that divides a complete image signal into N blocks and then distributes them to N video display units. It uses multiple ordinary video units to form a large-screen dynamic image display, which can support the simultaneous connection of multiple video devices. The video splicer can combine multiple physical outputs into an ultra-high-resolution display output after superimposed resolutions, allowing the screen wall to form a logical display with ultra-high resolution, ultra-high brightness, and ultra-large display size, completing multiple signals. The source can be displayed in various ways such as windowing, moving, zooming, etc. on the screen wall.

This report studies the global Video Splicer production, demand, key manufacturers, and key regions.
