Abstracts

The global Video Streaming for Smart TVs market size is expected to reach \$ 156350 million by 2030, rising at a market growth of 21.4% CAGR during the forecast period (2024-2030).

The Video Streaming market encompasses services, platforms, and devices that enable users to stream and watch digital video content over the internet. Video streaming has become a ubiquitous medium for entertainment, education, and communication, and as a result, the market has experienced steady growth over the past decade.

Key trends in the Video Streaming market include:

- 1. Continued Growth:** The video streaming market is continuing to grow rapidly as more users access content online and adopt streaming services as their primary form of entertainment.
- 2. Rise of Over-The-Top (OTT) Services:** Over-The-Top (OTT) services have emerged as a popular alternative to traditional video services, offering users the ability to watch video content over the internet without requiring a cable or satellite subscription. Popular OTT services include Netflix, Amazon Prime Video, Hulu, Disney+, and many others.
- 3. Increased Focus on Original Content:** Streaming services are increasingly investing in original content to differentiate themselves from competitors and to attract and retain subscribers. This investment has led to a proliferation of high-quality, exclusive programming on services like Netflix and Amazon Prime Video.

4. **Shift to Live Streaming:** Live streaming has gained popularity, particularly in the gaming and sports market. Platforms like Twitch and YouTube Live have become essential parts of the gaming industry, while live streaming of sports events by platforms like ESPN+ and DAZN is becoming increasingly common.

5. **Integration of Artificial Intelligence (AI):** Streaming services are using AI technologies such as machine learning to personalize content recommendations, improve streaming quality, and enhance user experiences.

6. **Development of Virtual Reality (VR):** Streaming services are beginning to explore the potential of Virtual Reality (VR) for delivering a more immersive and interactive streaming experience. Platforms like Netflix and Hulu are testing VR versions of their services.

7. **Monetization Models:** Streaming services are exploring new monetization models beyond subscription-based services. Ad-supported content, pay-per-view content, and sponsorship deals are becoming more common.

8. **Collaboration between Streaming Services and Traditional Media:** Traditional media companies are partnering with streaming services to reach audiences outside of traditional cable or satellite subscriptions. These collaborations are driving a convergence between streaming and traditional media, with companies offering bundled services that combine cable, internet, and streaming services.

The Video Streaming market is expected to continue to grow as users continue to shift towards a digital-first entertainment experience. As the market expands, we can expect to see an increased focus on original content, live streaming, VR, and the integration of AI, as well as new monetization models. Additionally, collaborations between streaming services and traditional media will continue to shape the future trends in this market.

Streaming refers to any media content – live or recorded – delivered to computers and mobile devices via the internet and played back in real time. Podcasts, webcasts, movies, TV shows and music videos are common forms of streaming content
