The global VIGA-EIGA Dual-mode Atomization Powder Making Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

VIGA-EIGA Dual-mode Atomization Powder Making Equipment is a type of equipment used for producing fine metal powders. It uses a dual-mode atomization process, which means that it can produce both gas atomized and water atomized powders. This equipment is particularly useful for producing powders that have a narrow size distribution and a high degree of purity.

In the gas atomization mode, the metal is melted and then atomized using a high-pressure gas stream. This process produces powders that are spherical in shape and have a relatively narrow size distribution. In the water atomization mode, the metal is melted and then atomized using a high-pressure water stream. This process produces powders that are irregular in shape but have a higher degree of purity.

The VIGA/EIGA Dual-mode Atomization Powder Making Equipment is widely used in industries such as aerospace, electronics, and biomedical engineering, where high-quality metal powders are required.
