According to our (Global Info Research) latest study, the global Vinca Alkaloid API market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Vinblastine antineoplastic drugs are alkaloids extracted from the vinca flower of the Apocynaceae plant. Currently, there are four types of vinblastine, vincristine, vindesine, and vinorelbine that have been marketed and used clinically. Studies have shown that the cytotoxicity of vinblastine drugs is achieved through the combination with tubulin. They have a common binding site on the tubulin dimer, which can inhibit the polymerization of microtubules and hinder the formation of pituitary microtubules, thereby stopping the metaphase of mitosis and preventing the division and proliferation of cancer cells.
